**About me:**

My passion for computers started when I was about 8 years old after my dad bought a TK85, a Brazilian ZX81 clone and if you wanted the computer to do anything you had to program it using BASIC. Not claiming to be a programmer back then! I just loved typing in all the code from a games book I had to watch a bunch of squares move on the screen!

Anyway, it wasn't until 2008 when I was 24 that I got my first (current) job in IT. Most of my work at Mangolab is front-end related, usually HTML, CSS, Javascript with the occasional WordPress site. I also have some experience in Delphi and have worked on a few small projects.

Although I spend most of my time with Web stuff what I really enjoy doing is programming and studying about it. I have spent the last 6 years (2011-17) studying for an Open University degree in Computing & IT & Maths and graduated this year. I am also a Microsoft Certified Professional.

**Objective:**

I am looking to change the direction of my career as a Front End developer and move more into a Full Stack or Back End Development opportunity. I have a strong understanding of C# and .NET from my studies and am therefore looking to work with it in a commercial setting.

**Technologies:**

**HTML, CSS, JavaScript, jQuery, C#, .NET**

**Experience:**

**Mangolab**                                                     April 2008 to present

My core responsibilities are to support and maintain Mangolab's main customer facing website and internal applications, developed in Delphi, by adding new features to improve efficiency, and general bug fixing. I am also responsible for creating WordPress themes for occasional customers.

**Education:**

**Bachelor's Degree – Computing & IT & Maths**                  September 2017

The Open University

**Certifications:**

**MCP: Programming in C#**                                       April 2018

Microsoft

**MTA: Software Development Fundamentals**                       November 2017

Microsoft
